Artificial Neural Networks for Beginners

3.1. Exercise This exercise is to become familiar with artificial neural network concepts. Build a network consisting of four artificial neurons. Two neurons receive inputs to the network, and the other two give outputs from the network. There are weights assigned with each arrow, which represent information flow.

A hidden layer in an artificial neural network is a layer in between input layers and output layers, where artificial neurons take in a set of weighted inputs and produce an output through an activation function. It is a typical part of nearly any neural network in which engineers simulate the types of activity that go on in the human brain.
