Data structures and algorithms in Java Part 1 Overview

Java programmers use data structures to store and organize data, and we use algorithms to manipulate the data in those structures. The more you understand about data structures and algorithms, and how they work together, the more efficient your Java programs will be. This tutorial launches a short series introducing data structures and algorithms.

Data Structures Algorithms in Java SAMS

Data structures are ways in which data is arranged in your computer's memory (or stored on disk). Algorithms are the procedures a software program uses to manipulate the data in these structures. Almost every computer program, even a simple one, uses data structures and algorithms. For example, consider a program that prints address labels.
