Gastroesophageal reflux disease GERD Symptoms and

Acid reflux occurs when the sphincter muscle at the lower end of your esophagus relaxes at the wrong time, allowing stomach acid to back up into your esophagus. This can cause heartburn and other signs and symptoms. Frequent or constant reflux can lead to gastroesophageal reflux disease (GERD).

<http://tpnmarketing.sharedby.co/Gastroesophageal-reflux-disease--GERD--Symptoms-and--.pdf>

Gastroesophageal Reflux Disease Symptoms Diagnosis

Gastroesophageal Reflux Disease (GERD) is a digestive disorder that occurs when acidic stomach juices, or food and fluids back up from the stomach into the esophagus. GERD affects people of all ages from infants to older adults.

Diagnosis and treatment of gastroesophageal reflux disease

Gastroesophageal reflux disease (GERD) is a common disease with a prevalence as high as 10%-20% in the western world. The disease can manifest in various symptoms which can be grouped into typical, atypical and extra-esophageal symptoms. Those with the highest specificity for GERD are acid regurgitation and heartburn.
