### **Teaching Introductory Organic Chemistry A Problem Solving**

A laboratory-centered approach to teaching introductory organic chemistry has been developed to accommodate large (250+ students) course sections. Through collaborative problem-solving, students are required to begin to develop the critical, creative, and complex thinking skills of chemical practitioners. These skills are emphasized in both classroom and lab components of courses.

Organic chemistry is a subdiscipline of chemistry that studies the structure, properties and reactions of organic compounds, which contain carbon in covalent bonding. Study of structure determines their chemical composition and formula. Study of properties includes physical and chemical properties, and evaluation of chemical reactivity to understand their behavior.
